

MOUNT GOLF CLUB'S MULTI-FUNCTIONAL WATER SOLUTION

MOUNT GOLF CLUB CASE STUDY

“I WOULD ABSOLUTELY RECOMMEND THEM. THEY’RE VERY HONEST, UPFRONT, GREAT COMMUNICATORS, AND THEY PROVIDE GOOD AFTER-SALES CARE. THEY ARE REALLY GOOD AT CUSTOMER RELATIONS.”

Mount Golf Club is situated in Mount Maunganui and only minutes from one of the country’s most popular surf beaches.

The club includes an 18-hole premier golf course with a Pro Shop and coaching facilities, as well as a venue for events.

When the Mount Golf Club began constructing a new greenskeeper shed in 2019/2020, the consent dictated the requirement for a firewater reserve tank. Michael Williams, General Manager at Mount Golf Club, sought a reliable and efficient solution.

Michael approached KlipTank after they were recommended by the Project Manager managing the installation of the new greenskeeper shed.

After meeting with Michael and determining what would work best for their needs, KlipTank recommended the E342.4 model — an above-ground tank that spans 13 metres in diameter, stands 2.4 metres high, and offers a whopping usable volume of just over 250m³.

Michael commended the KlipTank team on the ease of the preparation and installation process saying, “They gave us material regarding site preparation that was very clear and communicated what they were going to do and what we needed to do”.

“The installation process went very smoothly, they did exactly what they said they would do with no hold ups”.

MOUNT GOLF CLUB CASE STUDY

In 2023, a couple of years following the successful installation of the emergency firewater system, the golf club needed to modify the tank to supplement its irrigation system. In keeping with the exceptional service received the first time, Michael had no hesitation in asking KlipTank for their assistance once again.

“They know their tanks inside out and were so good to deal with the first time. It was an absolute no brainer to work on the modifications with them”.

The alterations required the tank to guarantee water level equilibrium—a critical aspect when modifying a fire tank for additional uses. Richard Billington, Sales Representative at KlipTank explained “This was not as easy as it sounds because, being a fire tank, the inflow had to equal output to ensure the water level remained close to equilibrium”.

Despite the complex requirements, the KlipTank team ensured Mount Golf Club’s tank would effectively serve dual purposes, never compromising on its primary role in fire safety while adeptly supporting irrigation.

The successful initial installation and the subsequent modifications reflect KlipTank’s professional expertise and service. As Michael states “I would absolutely recommend them. They’re very honest, upfront, great communicators, and they provide good after-sales care. They are really good at customer relations”.

Mount Golf Club’s partnership with KlipTank showcases their innovative response to regulatory requirements, solidifying KlipTank’s reputation as a provider of tailored, reliable, and customer-focused water storage solutions.

“THEY KNOW THEIR TANKS INSIDE OUT AND WERE SO GOOD TO DEAL WITH THE FIRST TIME. IT WAS AN ABSOLUTE NO BRAINER TO WORK ON THE MODIFICATIONS WITH THEM.”
